Content Development

3D and Animation

Our talented team of 3D animators can do some amazing modeling and animation. Whether you want to fly through a crowded city, walkthrough the interior of a hotel in construction phase, create a dynamic attract loop or show the inside of a complicated machine, we can help you make your visions come to life virtually.

Interactive

Intuitive and interactive user experiences let your audience take control, engage and interact with your product and service offerings. Our interactive content can work with your corporate, ERP, or retail database. Web-based content updates makes changes very easy.

Rich Media Templates

Rich media content on the fly! When a message needs to be sent to an audience quickly, our data driven Digital Signage Templates come in handy. Together with our Web-based Content Management System, this solution lets you adjust the look and feel to match your corporate identity as well as change and update content. Employee recognition, announcements, upcoming events, can all be customized from your computer with our data driven templates.

Kiosk

Self-service is a great way to improve traffic flow and deliver a message to an audience without paper waste. Customers, employees or visitors can browse content with full multimedia capabilities, connect to the web or interface with peripherals as required (badge scanners, card printers, receipt printers). Games, Trivia, context-driven information, marketing attract loops, and large format touch screens, extend the functionality of kiosks.

Applications

Jump start your interactive or kiosk project with our Vertical Market Solutions. Why re-invent the wheel when our existing applications can be easily customized for you?

We have applications developed for the Retail, Hospitality, Malls & Venues, Real Estate, Tradeshow and Places of Worship markets. Our line of Wayfinder and Product Locator solutions help visitors, clients and customers find their way with an interactive map and search engine. This green technology reduces the need for printed materials.
